Design Hardware Product Information Guide provides a good outline to our product offering. For more information, please visit www.designhardware.net

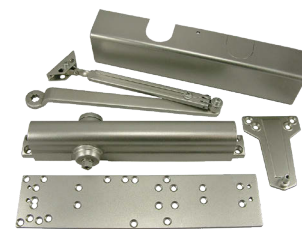

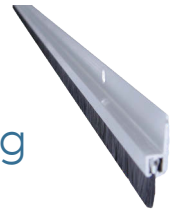

- 5 Knuckle & UL Spring Hinges in a broad variety of finishes.
- Door Stops, Push/Pulls, Flush Bolts, Protection Plates & more.
- A simple yet inclusive offering of Threshold & Weatherstripping products to seal and protect openings.
- 116, 316, & 416 Door Closers with a large array of accessories.
- Grade 1 & Grade 2 Cylindrical and Deadbolt offerings to fit many applications.
- Rim & SVR Exit Devices with several trim options.
- Lifetime Warranty on most items.

Hinges

Flat Goods & Accessories

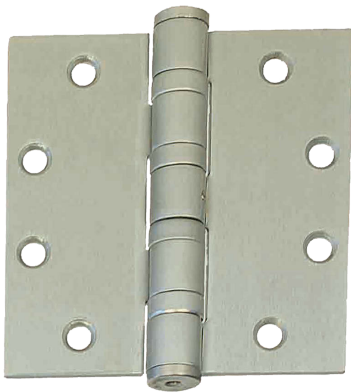

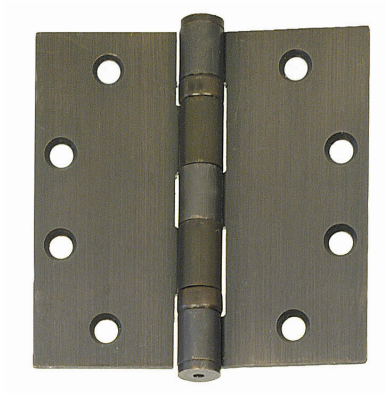

Threshold & Weatherstripping

Door Closers

Locks & Exit Devices

BB5 Series

Standard Weight, Full Mortise

The BB5 is equipped with 2 ball bearings and a steel or stainless steel base metal making it perfect for most commercial fire rated and non rated openings. It is stocked in a wide variety of finishes and has an optional NRP (non-removable pin).

BB5-HW Series

Heavy Weight, Full Mortise

The BB5-HW is equipped with 4 ball bearings and a thicker gauge of steel or stainless steel than the BB5 Series. This hinge is used in extra heavy duty applications and requires the doors/ frames to be specially prepped for the hinge thickness. This hinge is only available with a NRP (non-removable pin).

Spring Hinges

Grade 1 – Standard Weight, Full Mortise

The Spring hinge allows for light duty or value engineered applications to be self closing without carrying the cost of a door closer.

Continuous Hinges

Heavy Weight

Our offering covers an array of different mortise and full surface options in a variety of size and finish options.

Stops

Wall, Dome, Kick Down, Floor, Chain

Simple, clean and readily available, our door stops will increase the life of your doors, walls, and hardware.

Push/Pulls

With a classic look and great finish quality, our push/pulls are a perfect alternative to latching hardware on your non fire rated openings.

Flush Bolts

Metal Door/Wood Door

Manufactured in a combination of brass and steel material, flush bolts are a good choice to secure the inactive leaf of fire rated and non rated pairs of doors. Our Dust Proof Strike is a good option for use with the bottom flush bolt in preventing dirt and debris from interfering with the engagement of the bottom bolt. It can also be used for the bottom strike to our vertical rod exit device.

Kick & Armor Plates

Whether you need a kick plate for form or function (protect your door), our plates are readily available and equipped with an excellent finish quality that will satisfy either objective.

Threshold/Weatherstripping

Classified by UL, this product offering is available in different styles and sizes for exterior weatherstripping, smoke control, sound, etc.

Viewers

Wide Angle (200°)

Our UL Viewers are manufactured out of brass with a wide angle plastic lens. Viewers provide wide angle security viewing of exterior side of door.

Coordinators

Heavy Weight

Our UL listed coordinators are available as flat bar or gravity type.

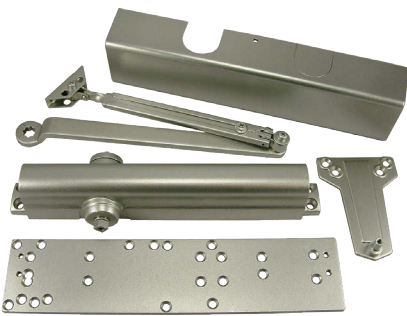

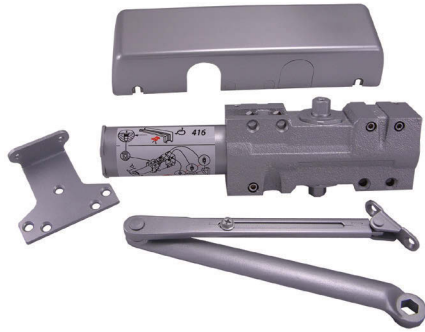

Signage

Heavy Weight

Our restroom signage has both handicap image and braille.

416 Series

Grade 1 – Heavy Duty, Surface Mounted

The 416 is made of cast iron and designed to take high levels of use and abuse. It is equipped with adjustable opening spring power, 3 control valves, and will work well in high traffic applications. It is most commonly used on heavy doors. Now available with metal 26D cover, bright chrome US26, and bright brass US3.

316 Series

Grade 1 – Heavy Duty, Surface Mounted

The 316 is made of cast aluminum alloy and is our most versatile door closer. It is equipped with adjustable opening spring power, 3 control valves, and will work well in virtually all high traffic applications. This door closer is our #1 selling door closer and comes available in 5 stock finishes (including electroplated bright brass US3 and bright chrome US26 metal covers).

316R Series

The 316R is the same closer as our 316 only packaged with a Patented Retrofit/Replacement Mounting Plate. It provides the ability to replace 33 of the most popular door closers in the market.

Visit www.replacementdoorcloser.com for more details.

US PATENT #7698796

116 Series

Grade 1 – Standard Duty, Surface Mounted

The 116 is made of cast aluminum alloy and although it is recommended for almost all openings, it is most commonly used in storefront door applications. It is equipped with adjustable opening spring power, 3 control valves, and will work well in virtually all high traffic applications.

Closer Accessories - Designed to offer more door control including such options as hold open, heavy duty and installation versatility options.

M Series

Grade 1 – Heavy Duty, Mortise Lock

The M Series is produced for the most demanding of openings. Nothing beats the track record of a mortise lock over the lifetime of a building. If you are looking for the highest level of security, durability & functionality, look no further.

Z Series

Grade 1 – High Security, Cylindrical Lock

The Z Series is the toughest cylindrical lock that Design Hardware produces.

High Security Latch

X Series

Grade 1 - Cylindrical Lock

The X Series is the perfect "every day" commercial lever lock, fitting Standard Duty Grade 1 applications. With a 3 3/8" rosette and thru bolt installation, it is our #1 selling and most versatile lock. It is available in 6 finishes and 5 distinct lever styles

J Series

Grade 2 – Cylindrical Lockset

The J Series is a lock for the more common application. This lock offers a fixed lever mechanism yet still has removable through bolts and a large 3 3/8" rosette.

Flat Lever

Curved Lever

Half Curved Lever

S-A Lever

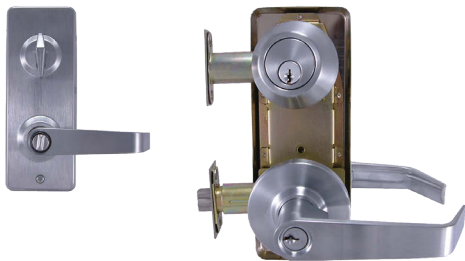

S-B Lever

V Series

Grade 2 – Standard Duty, Cylindrical Lock Commercial
 applications sometimes require commercial durability but desire a residential feel. A 3" rosette and non-thru bolted application, paired with 5 lever design options, makes the V Series a perfect fit for light/medium duty jobs.

I Series

Grade 2 – Standard Duty, Interconnected/Cylindrical Lock
 The I Series is a cylindrical lock and deadbolt combination that was designed using the V & D Series. Built to simultaneously retract both the deadbolt and latch, this lock provides both security and one-step egress. Because the I Series has a V Series body, the 5 lever design options are available.

K2 Series

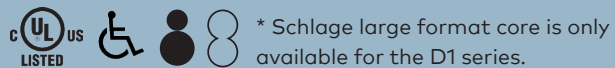

Grade 2 – Standard Duty, Cylindrical Lock
 When ADA is not a concern and a classic knob design is desired, the K2 Series will fit the bill.

D Series

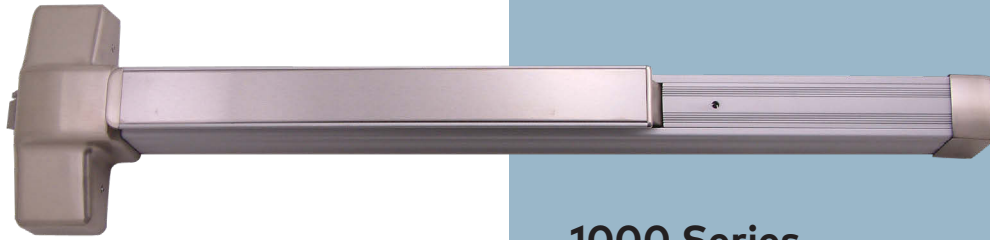

D1 = Grade 1 – Heavy Duty
D2 = Grade 2 – Heavy/Standard Duty

The D Series will work in many applications. The D1 version is equipped with an additional solid steel collar, security shield and a wood frame reinforcer. Both the D1 and D2 Series are equipped with a 2" ADA thumbturn and Heavy Duty Grade 1 anti-saw bolt. Now offering Classroom function and more.

 Designates designs available with Schlage large format interchangeable core options (SLFIC).

 Designates designs available with small format interchangeable core options (SFIC).

1000 Series

Grade 1 – Heavy Duty, Rim or SVR (Surface Vertical Rod),
Fire Rated or Non-Fire Rated

The 1000 series is strong enough to take high levels of use and abuse. With the 1000 Series, our very own Design Hardware engineering and product development team delivers an extremely reliable and durable product. This device is readily available in several finishes, mounting styles, door widths and a broad array of trim options including alarmed exit and cylinder dogging. Optionally, the 1000 series can have ELR (Electric Latch Retraction) that is a low amp draw motor driven design. Available finishes include US3, US4, US10B, US26 & US32D.

2000 Series

Grade1 – Standard Duty, Rim or SVR (Surface Vertical Rod),
Fire Rated or Non-Fire Rated

The 2000 series is designed for everyday use and is our most economical exit device option. This device is readily available in several finishes, mounting styles, door widths and a broad array of trim options. Available finishes include Aluminum, Dark Bronze, Gold Painted and US32D Brushed / Satin Stainless Steel.

Designates designs available with small format interchangeable core options (SFIC).

LE

Lever Escutcheon Trim

The LE trim is the heaviest duty trim Design Hardware offers. It is equipped with a unique tailpiece (actuator shaft) that is a direct drive design putting all torque straight into the device. This LE trim also features a field-friendly handing solution. This trim is our recommended choice for vertical rod applications. Finish options match those of our 1000 and 2000 series devices.

KIL/KIK

Keyed Lever/Knob - Cylindrical Design

The KIL trim is ideal for most applications because of its ease of installation, lever versatility and functionality. This trim is essentially 1/2 of an X Series lever lock that is equipped with a hardened steel tail piece. The KIK is the answer for non-ADA knob trim applications.

TP

Thumbpiece

The Thumbpiece trim is used on openings where a pull handle is desired, yet requires latching and does not have to meet ADA requirements.

2P

Pull Trim

The 2P trim provides a clean, traditional look. This trim is an economical choice, and an ideal choice for high use doors that will be dogged down for push/pull applications.

DFP/FP

Double Finger Pull/Finger Pull

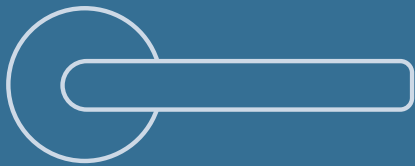

The DFP/FP trim are our most economical choices, while still providing trim control options – for most common low traffic openings that want more than exit only.

KRM/Mullion

The KRM (Keyed Removeable Mullion) is ideal for double-door applications and can easily be removed in case large items need to pass through the opening. Available in 7', 8' and 10'.

NOTE: All trims can be used for both 1000 and 2000 Series Exit Devices.

**Providing total openings solutions, based on innovation
and tradition combined.**
