GUIDE

MODERN MINIMALIST STYLE

Modern minimalism incorporates geometric shapes, clean lines, and uncluttered space. It features tone-on-tone colors and simple profiles to accent natural finishes. Offering a large, open room concept, it is the perfect style for making a statement with a prominent light fixture.

BEHIND THE DESIGN

Look out for our Behind the Design visions and inspirations. With decades of combined experience in lighting, interiors, fashion, and consumer goods, our product design team find their inspiration from traveling the world, gaining insight into a variety of styles and trends. These experiences and inspirations come to life and transform into beautiful lighting collections.

Maximizing Minimalist Design

Minimalism is both a decorative style and a way of living. These interpretations follow the same principle -- functionality. A minimalist design approach breaks down a room into necessities, every piece having a purpose. It is easy to see why lighting is such an integral part of modern minimal design.

Creating inspiration through collaboration

Throughout the élan catalog, we pair some of our lighting with pieces from our sister brands Delta® Faucet, Brizo®, Behr® Products and Liberty Hardware®. Partnerships like these help us further the creative vision when pairing lighting and other decorative fixtures together. Visit their company websites for more product information and inspiration.

FOUNDATIONAL FINISHES

Choosing the finish color of a light fixture can be overwhelming, there are so many to select from. To help, look to the fundamental finish options that match the modern decor style. Understanding these finishes will make it easier to shine a spotlight on which will complement your décor best.

Back to Black

Black is the perfect finish if you want to mix metals, because it pairs well with almost anything. From brass to chrome to gold, black can mix in to serve as a standout accent or blend elegantly in the background.

White Light

White is a fresh finish when used on fixtures because it can effortlessly carry through any décor style. A glossy white can make a look more modern, while a matte white is timeless.

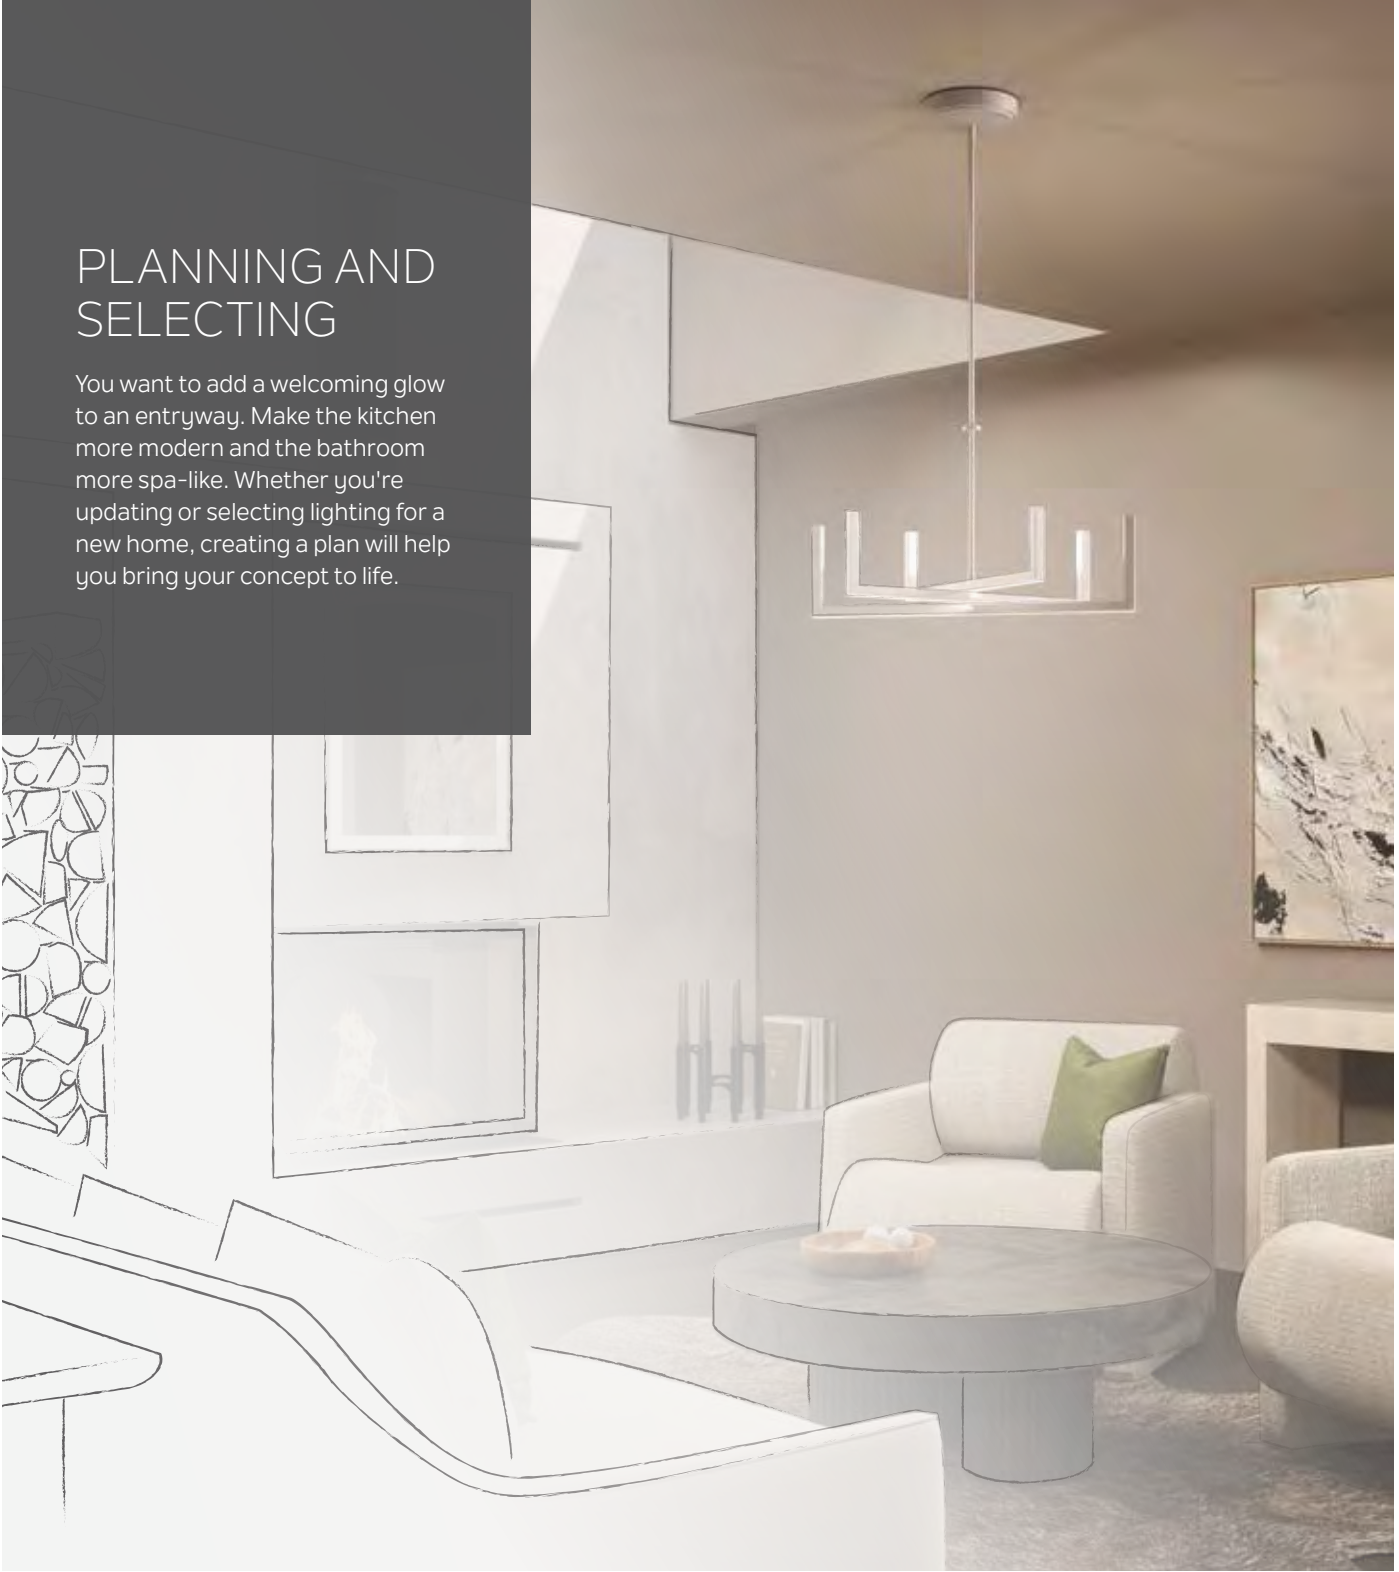

Gold Standard

Gold is a universal accent color while being anything but boring. Depending on the finish tone, gold can be the spark that transitions a space from classic to mid-century modern to art deco.

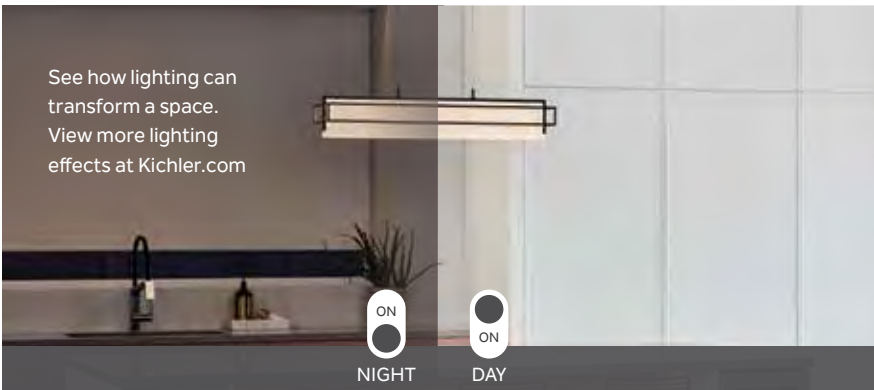

PLANNING AND SELECTING

You want to add a welcoming glow to an entryway. Make the kitchen more modern and the bathroom more spa-like. Whether you're updating or selecting lighting for a new home, creating a plan will help you bring your concept to life.

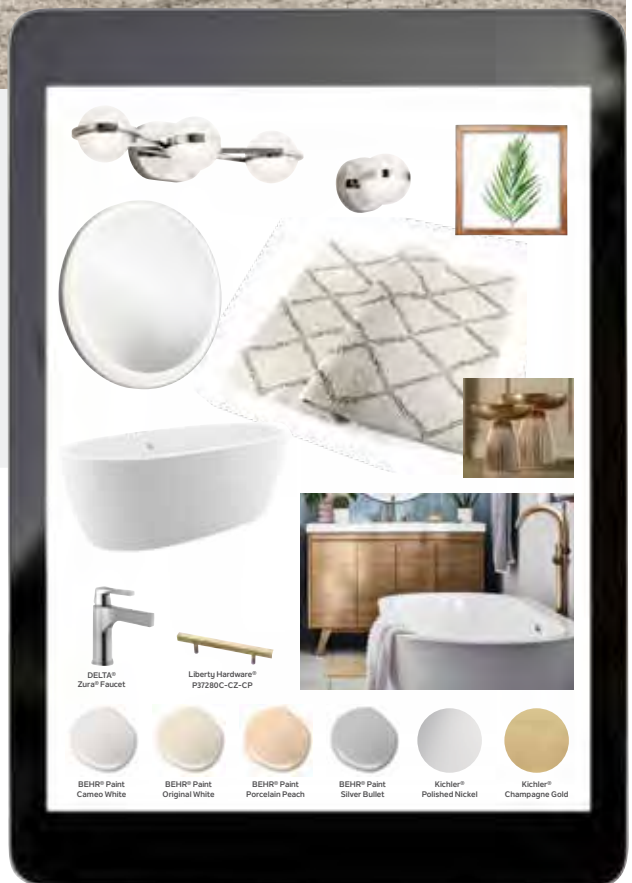

See how lighting can transform a space. View more lighting effects at Kichler.com

Know Your Vision

Just like builders make blueprints, you can make a "lighting print." Go room by room and record your inspiration in whatever way works for you...on your phone, tablet, computer, or maybe even pencil and paper. Consider making a vision board of what you want the lighting to look like. It's something you can refer back to as you go through the more functional process of getting it done.

- Kichler® Champagne Gold

Know Your Space

Different spaces have different lighting proportions. As long as you know the height and width of the room, choosing the right lighting is easy. If you're working with a small space with a lower ceiling, a monumental chandelier probably isn't the best idea. You'll want something smaller in diameter, such as a semi flush or flush mount – and yes, they will have just as grand of an effect as something in a much larger size.

Know Your Options

Who says you can't have a pendant or two in a bedroom? Or even a chandelier over a kitchen island? There are many alternative ways to bring more light to every room, such as incorporating light layering, accent lighting with sconces, or making a statement with a geometric fixture.

Ready to Get Started

Once you have laid out which fixtures will go in which room and the mood you want to convey, you are ready to start browsing fixtures to fit your design, vision and space.

Get Inspired! Find all of our latest products, style tips, videos, and more on [Kichler.com](https://www.kichler.com)

LEARN ABOUT

LED

INTEGRATED LED BRINGS OUT THE BEST IN YOUR SPACE

Our LED lighting is engineered for premium performance—meaning homes shine with a better quality of light, and you benefit from the enhanced energy savings.

DID YOU KNOW?

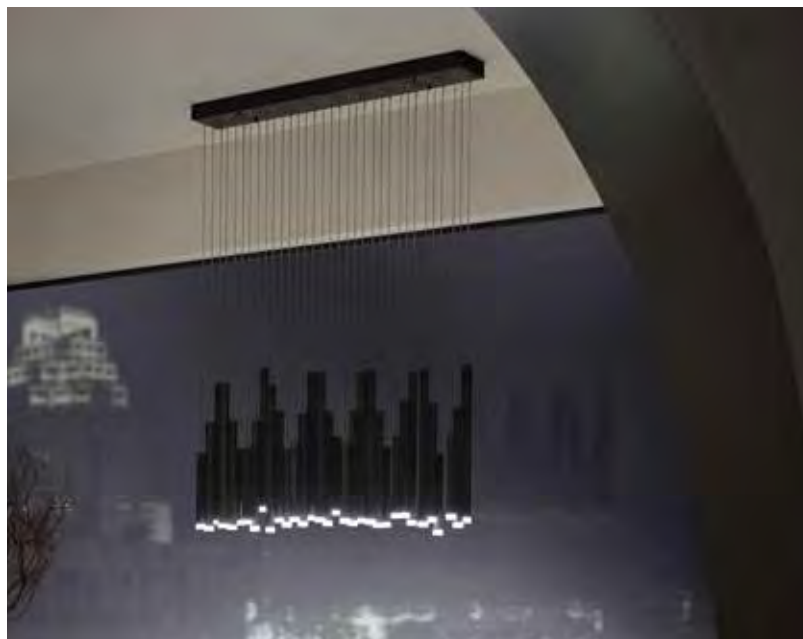

LED stands for:
Light Emitting Diode

WHAT DOES INTEGRATED LED MEAN?

Integrated LED is when the LED diodes are built into the fixture versus an LED bulb that can be added or removed from the fixture. These all-in-one fixtures come in a variety of styles and sizes, are easy to order, install and maintain since there's no bulb to buy, insert or replace.

Compared to the standard incandescent bulbs, LEDs:

- Are **smaller in size**, allowing for new looks and compact fixture designs.
- **Consume less energy**, resulting in lower utility costs.
- Are proven to be **more durable and reliable**.
- Have a **life expectancy that is 15 times longer** than an incandescent bulb, leading to lower replacement costs.
- Are **less expensive** to the customer over the lifespan of the product, despite higher upfront costs.

LEARN MORE ABOUT LUMENS

Watts vs. Lumens

- **Watts** is the measure of energy required to light the product. The lower the wattage, the less energy consumed.
- **Lumen/Light Output** measures the light output. The higher the lumens, the more light that is emitted.
- **Lumens per Watt/ Efficacy** is the measure of efficiency. The higher the lumen per watts, the more energy efficient the product is.

Total Lumens vs. Delivered Lumens

Total Lumens	Delivered Lumens
The total amount of light emitted from the LED module itself.	Represents real exit lumens that are projected from a lamp or luminaire.
Does not take into account any light losses from filtering light through the LED lens, glass, diffuser, or luminaire cover lens. For example, losses from the distribution of light from an internal reflector or luminaire positioning are not accounted for.	Takes into account the filtering effect of LED lens, glass, diffuser, or luminaire cover lens. It is the actual working lumens projected toward the horizontal or vertical plane and accounts for any system losses that may exist within a fixture or lamp.

GENERAL BENEFITS OF INTEGRATED LED

LEDs are used in a wide range of applications because of their unique characteristics, which include ease of maintenance, resistance to breakage, and the ability to focus the light in a single direction instead of light spreading out in many directions.

FIVE ADVANTAGES OF INTEGRATED LED

1 Saves You Money

- Today's LED bulbs can be 60-70 percent more energy efficient than conventional incandescent lights and cut energy use by up to 70 percent.
- On average, the homeowner will save \$75 per bulb on the lifetime operation of an Energy Star® LED bulb vs. a traditional incandescent. Multiply that by the number of bulbs in the home and the number of years the home is occupied and that can add up to a considerable savings.
- With little-wasted energy, LEDs ultimately save homeowners long-term energy costs.

2 Durability

- There is no filament that can be broken, reducing the chance of breakage before use.
- LEDs are used in a wide range of applications because of their unique characteristics, which include compact size and ease of maintenance.

3 Output

- Unlike Compact Fluorescent Light bulbs (CFLs), LEDs will turn on to their stated light output immediately – no waiting for the bulb to reach full illumination.
- With LEDs, we have the flexibility to design our fixtures with either light focused in a single direction or spreading in a general direction.

4 Environmental Factors

- LEDs contain no mercury (like CFLs) and have a much smaller environmental impact.
- UV Free - UV emissions are said to be harmful to health after prolonged exposure.

5 Temperature

- Incandescent bulbs release 90 percent of their energy as infrared radiation making them hot to the touch. While CFLs release 80 percent of their energy, a high quality LED produces no infrared radiation keeping them typically cool to the touch.

LED GLOSSARY

Color	CCT	Kelvin Temperature (K) indicates the color of the light source or the color you are getting from an LED fixture
	COLOR CORRELATED TEMPERATURE Also referred to as Color Temperature and displayed as Kelvin Temperature	2700K is a warmer light—closer to incandescent 3000K trends warm, but optically closer to a pure white 4000K trends cooler, but perceived as a bright white 5000K is cool, perceived often as having a blue hue
	CRI	CRI reflects the color that the light brings out of objects
	COLOR RENDERING INDEX Particularly of importance indoors where there is less natural light	90+ CRI results in a more vibrant and “true” color A lower CRI (<80) would make seemingly colorful objects appear dull and unappealing.
Brightness	LM	The higher the lumens , the more light you are getting
	LUMENS Reflect the amount of light from a fixture	Lumens less than 550 (<550) typically work best for accent or niche lighting 550 to 850 lumens give light levels equivalent to traditional 40W or 60W incandescent bulbs respectively, and are ideal for downlighting 850 to 2000 lumens typically work best in spaces with average ceiling height (9' to 12') 3000 to 5000 lumens are typically best for larger spaces, vaulted ceilings, and more task driven applications that require significant light
Light Delivery	DELIVERED LUMENS	You may see delivered lumens throughout this catalog as we work diligently to provide that level of data
		Source lumens = the brightness at the source Delivered lumens = the brightness recognized closer to eye level, or the level in which the light has the most impact in a space
Efficiency	LPW	LPW reflects how many lumens you get per watt—which is a sign of efficiency. Energy Star® standards for indoor fixtures vary based on size and watt criteria:
	LUMENS PER WATT Also referred to as efficacy	> 50 LPW for all lamp types below 30 total listed lamp watts > 60 LPW for all lamp types that are < 24 inches and > 30 total listed lamp watts > 70 LPW for all lamp types that are > 24 inches and > 30 total listed lamp watts

FEATURED
COLLECTIONS

"Caputo's playful silhouette as inspired by the layering of jewelry that has become more popular. The asymmetrical design allows for dynamic and intriguing light distribution."

– Kichler® Design Studio

84321MBK

CAPUTO™

With crisp lines and clean forms, Caputo is sleek, contemporary, and inspiring. Intersecting rings allude to celestial elements. It combines light and sculpture to effortlessly add depth to a room.

CAPUTO™

Finish: Matte Black, White | Diffuser: Frosted Silicone Diffuser

"Jovian was inspired by the Memphis Modern design movement of the early 1980s. This movement utilizes bold geometry in an unapologetic use of space that is as striking as it is playful. Jovian creates a beautiful and consistent plane of light and practically disappears when not in use giving an exciting and impactful illusion every time it's turned on."

— Kichler® Design Studio

84314CG | 2LT BATH 85091PN

JOVIAN™

Heavily influenced by the Memphis Movement, Jovian unapologetically uses geometric shapes and bold finishes. Inject an elevated playfulness into your space with this statement lighting fixture. Cylindrical and spherical beads on the cables, a translucent light guide, and a bold circular plane easily make Jovian the center of attention.

"The layered arms of Charter were inspired by the cantilevered architecture that became prominent in the 1930s and 40s. The juxtaposition of matte and polished finishes create a contrasting sculptural element, vibrant in a multitude of applications."

– Kichler® Design Studio

84081MBK

CHARTER

Make your personal mark. Adjust the arms of Charter pendant to capture any mood. Light emits from each arm allowing you to fit to your space, style and surroundings. Inspired by the cantilevered architecture from the 1930s and 40s, the simple geometric statement is making a strong comeback.

ADJUSTABLE ARMS ON WALL SCONCE

84196

SORNO™

Oblong pill shapes and rich golden-tone hues came to define mid-century modern style - and we love a good comeback. The Sorno collection takes its cues from the past, blending a softly muted gold finish with a white glass diffuser. The resulting style is a sleek balance of tones and thoroughly modern influences.

LED
MIRRORS

SHINE IN UNEXPECTED WAYS

Unexpected adornments are a hallmark of a luxurious style. A vanity with a pop of color, a chandelier where you'd least expect it, or an LED mirror that surrounds itself in a glamorous glow.

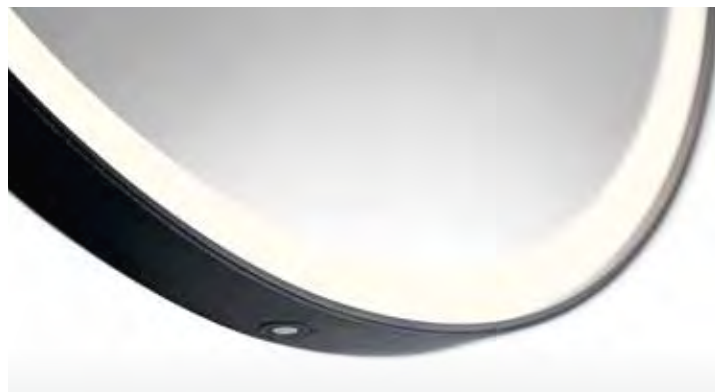

86004N

Perfect for bathrooms, powder rooms, dressing rooms, hallways, and foyers, LED mirrors provide a flattering glow with a delicately etched glass border or a sleek profile. Their geometric shape can often be mounted horizontally or vertically depending on the design of the mirror.

Plus, these beautiful mirrors provide a full-face glow as well as defogging capabilities and dual-color temperature - offering brighter light during the morning hours and cooler, relaxing lighting during the evenings. Our LED mirrors are also equipped with a dimmer, so the mirror can be set to the perfect light no matter the time of day.

CHENNAI™

The Chennai mirrors epitomizes premium décor. Its integrated LED light creates a unique effect that's both mysterious and alluring. Its refined, on-trend finishes won't be unnoticed, as this mirror is sure to quickly become the highlight of the room.

CHENNAI™

Finish: Matte Black, Satin Nickel, Champagne Gold | Diffuser: Backlit Border

BRETTIN™

The Brettin collection brings a sense of dimension and movement to a bathroom space. Inspired by a playful slingshot toy, each fixture features globe lights in a fun, mid-century modern arrangement. Brettin is an artful addition to today's contemporary powder room.

MOUNT VERTICAL OR HORIZONTAL

BRETTIN™

ROONE™

Roone fixtures are elegance redefined, and striking from any angle. The open-end design swoops up while the clear acrylic panel is delicately pinstriped for a retro touch. Once lit, Roone continues to dazzle, with LED light that illuminates the acrylic panel for maximum light distribution.

ROONE™

Finish: Chrome, Matte Black | Diffuser: Ribbed Acrylic

RECOMMENDED DIMMERS

Only electronic low voltage (“ELV”) dimmers should be used. LED fixture dimming performance will vary between dimmer manufacturers and models. Recommended ELV dimmers include: Legrand® adorne® sofTap® Dimmer ADTP703TUW4* or Leviton® Decora® SureSlide® Dimmer 6674-P0W. **

* Legrand®, adorne® and sofTap® are registered trademarks in the United States, other countries or both of Legrand France or its affiliates. Kichler claims no rights or interest in such trademarks.

** Leviton®, Decora® and SureSlide® are trademarks of Leviton Mfg. Co., Inc., registered in the United States and other countries. Kichler claims no rights or interest in such trademarks.

- Bulbs not included unless otherwise noted.
- Wattages stated are the maximum allowed; however, you may use lower wattage lamps to suit your lighting needs. Some recommended lamps are not available in the maximum allowable wattage.
- All electrical products are rated as 120-volt, AC unless otherwise noted.
- All electrical products are certified and listed to UL/CSA Standards for use in U.S.A. and Canada except where noted.
- On some products, in order to accommodate higher-than-normal ceiling height, extra lead wire is supplied and specified. With additional sections of chain or stems (not included), this allows an added measure of design flexibility.
- To serve you better, Kichler Lighting reserves the right to make improvements to the products in this catalog. Therefore, some products may change during the life of the catalog and the product information contained in this catalog may also have changed.

Consumer Notice

Federal Legislation to phase out 100 watt Incandescent Bulbs started January 2012

The federal government enacted the Energy Independence and Security Act of 2007 in December 2007, requiring all general-purpose light bulbs that produce 310-2600 lumens of light be 30% more energy efficient (similar to current halogen lamps) than current incandescent bulbs by 2014. The efficiency standards started with 100 watt bulbs in January 2012 and will end with 40 watt bulbs in January 2014.

Light bulbs outside of this range are exempt from the restrictions (historically, less than 40 watts or more than 150 watts). Also exempt are several classes of specialty lights, including appliance lamps, rough service bulbs, 3-way, colored lamps and plant lights.

By 2020, a second tier of restrictions will become effective; which requires all general-purpose bulbs to produce at least 45 lumens per watt. Exempt from the Act are reflector flood, 3-way, candelabra, colored and other specialty bulbs.

Many governments worldwide have passed measures to prohibit the sale of incandescent light bulbs for general lighting. The aim is to encourage use of more energy-efficient lighting alternatives, such as LED lamps.

All electrical products are UL/CSA/ or ETL Listed and Certified to UL/CSA Standards for use in U.S.A. and Canada except where noted.

We go to great lengths to assure the metal and glass finishes shown in the catalog match the actual products, but printing variations and variations in chemical finishes and the nature of hand-applied finishing will cause some differences between the printed images and actual product, and from one product to another.

Kichler Lighting products are not produced or associated with any Native American Indians, nor are they a Native American product or the product of a particular Indian, Indian tribe or Indian arts and crafts organization as defined by 25 U.S.C. §305 et. seq.

Kichler Lighting is a member of the American Lighting Association (ALA), a trade association representing the residential lighting and ceiling fan industries in the United States and Canada. Its membership includes leading lighting and fan manufacturers, showrooms (retailers), manufacturers representatives and designers. ALA members are dedicated to providing the public with the proper application of quality residential lighting.
