TECHNICAL INFORMATION

RATING SYMBOLS LEGEND

POSITIVE PRESSURE - CERTIFIED by UL to ANSI/UL10C Complies with IBC, NFPA 80 and NFPA 252 for application to hollow metal fire doors rated up to 3 hours, and wood fire doors rated up to 90 minutes (some ratings vary as noted).

CERTIFIED by UL to CAN/ULC-S104 and ANSI/UL10B Complies with NFPA 80 and NFPA 252 for application to hollow metal fire doors rated up to 3 hours, and wood fire doors rated up to 90 minutes (some ratings vary as noted).

NGP-EDGE® SEALING SYSTEM, CERTIFIED BY UL TO ANSI/UL10C CATEGORY 'G' Required for Category B wood fire doors to meet positive pressure requirements complying with IBC, and NFPA 252. See individual products for maximum door size and ratings.

SMOKE & DRAFT CONTROL GASKETING, CERTIFIED BY UL TO ANSI/UL10C AND ANSI/UL 1784 CATEGORY 'H' Complies with IBC and NFPA 105 for use on 'S' labeled positive pressure hollow metal fire doors rated up to 3 hours, and wood fire doors rated up to 90 minutes (some ratings vary as noted).

ACOUSTICAL TESTED to ASTM E90 Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements, and ASTM E2235 Standard Test Method for Determination of Decay Rates for use in Sound Insulation Test Methods.

AIR INFILTRATION Recommended product for minimum Air Leakage and a tight seal around the perimeter of doors.

ANSI/BHMA CERTIFIED Certified gasketing complies with American National Standard for Door Gasketing and Edge Seal Systems ANSI/BHMA A156.22, and is listed in the BHMA Certified Products Directory.

BUY AMERICAN

REQUIREMENTS

Buy American Act

Over 99% of our products are produced in the United States as a domestic construction material, as defined in the Buy American Act (BAA) of March 1933 and amended by the Buy American Act of 1988 and FAR 52.225-9. A Buy American certificate may be obtained on our website ngp.com.

Build America, Buy America Act

Most of our products comply with Build America, Buy America Act requirements under Title IX of the Infrastructure Investment and Jobs Act (IIJA), Pub. L. 117-58, §§ 70901-70953. Contact us for a Certificate of Compliance for products being supplied on your project.

MATERIALS

Metal retainers for gasketing are Aluminum Alloy 6063, T5 or T6 temper, unless noted.

Architectural Bronze gasketing is Alloy CDA 385 (Copper Alloy No. C38500), Architectural Bronze.

Stainless steel gasketing is Type 304, known for its excellent corrosion resistance, high tensile strength and resistance to oxidation.

NGP utilizes a variety of gasketing materials including Vinyl, Neoprene, Silicone, Nylon Brush, Thermoplastic Elastomers (TPE), Thermoplastic Vulcanizates (TPV), Polypropylene Pile, Ethylene-Propylene-Diene-Monomer (EPDM), Polyurethane, and Intumescent Fire Seals. Product illustrations indicate the gasketing material. Properties of many primary gasket materials are listed on the Perimeter Seals catalog pages.

Adhesive mounted gasketing utilizes a pressure sensitive modified acrylic adhesive protected by a release liner. Once installed it provides a permanent bond in exterior or interior locations. End use temperature range is -30°F up to 250°F. Shelf life of adhesive prior to installation is one year when stored at 75°F and 50% relative humidity or less.

UNDERSTANDING SOUND TRANSMISSION CLASS

The Sound Transmission Class (STC) is a single-number rating of the ability of a material or an assembly to resist airborne sound transfer at the frequencies 125-4000 Hz. In general, a door system with a higher STC rating blocks more noise from transmitting through an opening.

No matter what the STC door rating may be, it cannot perform without the proper STC Gasketing. Sound leaks from the perimeter of the door just like a draft of air.

STC SEAL SETS

SINGLE DOORS

NGP Seal Sets maintain the static door panel STC with NO DROP OFF in an operable condition, up to the STC Rating indicated.

SOUND TRANSMISSION CLASS (STC) RATED PAIRS OF DOORS

STANDARD DOORS WITHOUT SPECIAL ACOUSTIC CORES

Solid core wood doors with gasketing test to an STC Rating of approximately 28 to 30. Mineral core wood doors and Honeycomb core hollow metal doors with gasketing test to an STC Rating of approximately 32 to 36. Without gasketing these doors have no sound control and test to an STC Rating between 15 and 20.

To most effectively reduce sound transmission and maximize the acoustic performance we recommend the following be used:

PERIMETER AND DOOR BOTTOMS

- 107S** Perimeter Seal
- 700S** Seal at Head if a Parallel Arm Closer is Used
- 220S** Automatic Door Bottom
(To Allow the Automatic Door Bottom to Properly Seal, Please Add a Threshold.)

MEETING EDGE OF PAIRS

- 109N** Overlapping Astragal
- 5070** Adhesive Astragal
- 115N** Astragal Set

SCHOOL CLASSROOM DOOR STC REQUIREMENTS

ANSI/ASA S12.60 Acoustical Performance Criteria, Design Requirements, and Guidelines for schools requires interior doors opening into core learning spaces to achieve STC 30 or greater in their operable condition and interior doors into music rooms at least STC 40.

The following interprets ANSI/BHMA numbers which identify type and function of products. For products that meet ANSI/BHMA Standards, look for the BHMA certified logo next to the product in our catalog. For a complete listing, refer to the BHMA Certified Products Directory, available online at buildershardware.com

INTERNATIONAL BUILDING CODE (IBC)

The International Building Code (IBC) requires swinging fire doors to be tested in accordance with ANSI/UL 10C or NFPA 252, with the neutral pressure level established at 40 inches or less above the sill. This causes “positive pressure” forces against the door assembly above 40 inches.

The result is hot gases and smoke leak out between the door and frame above this level, posing a serious threat to life and safety; and on wood doors rapidly deteriorating the integrity of the door edges, requiring either a built-in or supplemental “edge sealing system” to pass the test.

Fire door assemblies in corridors and smoke barrier walls are required to be smoke and draft control assemblies tested in accordance with UL1784 allowing a maximum air leakage of 3 cubic feet per minute per square foot of door opening at ambient temperature (75°F) and elevated temperature (400°F). These assemblies require the letter “S” on the fire rating label of the door indicating compliance “when listed or labeled gasketing is also installed.”

Fire doors are classified into category A or B based upon their construction and edge sealing system requirements. Fire-rated gasketing is classified as follows:

Category G - Edge Sealing Systems

Category H - Smoke and Draft Control Gasketing

Category J - Gaskets other than Category G or H.

Category A Classified Fire Doors

Hollow Metal Fire-Rated Doors
Wood Fire-Rated Doors constructed with edge seals built-in during the manufacturing process.

Require Category H – Smoke and Draft Control Gasketing at **perimeter** and at **meeting edge of pairs** of “S” label doors in corridor locations or smoke barrier walls.

Require Category H – Smoke and Draft Control **door bottom seals** on “S” label doors where pressurization is provided to restrict smoke movement (typically controlled by HVAC system).

The following products are recommended UL Classified Category H for wood doors - 90 min. max., hollow metal doors - 3 hour max.

Perimeter: 2525, 5020, 5040, 5050, 5070, 5075

Meeting edge of pairs: 115N, 125N, 137N, 137S, 5070, 9115, 9125, 9600, 9605

Category B Classified Fire Doors

Wood Fire-Rated Doors that require the addition of a Category G classified edge sealing system in the field.

Require Category G – Edge Sealing System, at **perimeter** and at **meeting edge of pairs**.

Require Category H – Smoke and Draft Control Gasketing at **perimeter** and at **meeting edge of pairs** of “S” label doors in corridor locations or smoke barrier walls.

Require Category H – Smoke and Draft Control **door bottom seals** on “S” label doors where pressurization is provided to restrict smoke movement (typically controlled by HVAC system).

The following products are recommended UL Classified for both category G and H:

Perimeter 20 minute: 5050
Perimeter 45, 60, 90 minute: 9750

SELF-ADHESIVE GASKETING

FATT

FAST ATTACH TWO-WAY TAPE

- ▶ Fast Attach Two-Way Tape Provides an Easy and Effective Alternative for Gasketing Installation. Two-Way Tape is Applied to the Metal Housing Insuring a Quick and Easy Installation. Then for Security, 3 Tek-type Self-Drilling Screws are Provided to Further Secure Each Piece of Material to the Frame Stop. A No-Problem Installation With No Holes to Drill.
- ▶ To Order Add Suffix "FATT" to Product Number. See Price List for Products Available With this Feature.
- ▶ FATT IS NOT CLASSIFIED FOR USE ON FIRE DOORS.

SEAL FOR MULLION APPLICATIONS

- ▶ Closed Cell Silicone Sponge Strip
1 1/8" Wide x 3/32" Thick With an Adhesive Strip for Mounting Directly to the Face of the Mullion That Doors Close Against
- ▶ Available in 86" and 96" Lengths
- ▶ Self-Adhesive: See Adhesive Specifications on Page G14

5100N Black Silicone

CORNER PAD

- ▶ Helps Acoustics and Seals Corner Gap for Air Leakage Control. Apply to Jamb on Hinge Side, Opposite Bottom Corner of Door Edge.
- ▶ Self-Adhesive: See Adhesive Specifications on Page G14

ADHESIVE SPECIFICATIONS

Modified acrylic pressure sensitive adhesive protected by release liner. Provides high initial adhesion and long-term holding power for permanent mounting in exterior or interior locations. Resistant to aging, weathering, UV radiation, water, detergent, alcohol and the influence of chemicals. End use temperature range, long term exposure -30°F up to 250°F. Shelf life of adhesive prior to installation is one year when stored at 75°F and 50% relative humidity or less.

SELF-ADHESIVE SILICONE GASKETING
